PROFESSIONAL SUMMARY

Software Engineer with 6+ years in the software and IT industry. Builds and ships full-stack applications with Python, Django, FastAPI, Node.js and React, backed by solid REST API design, system design, Docker-based environments and CI/CD automation (deployment time cut by 50%). Built an AI customization layer that grounds LLM responses in domain-specific content, an approach equivalent to Retrieval-Augmented Generation (RAG), and has applied Generative AI and agentic AI tools in production work.

PROFESSIONAL EXPERIENCE

Associate Software Engineer | Yatnam Technologies July 2024 – Sep 2026

- Built and maintained 3+ full-stack internal business applications using Django, React, and Node.js, streamlining core operational workflows.
- Developed and deployed 25+ REST API endpoints using Python and Django; reduced average API response time by 30% through database query optimization.
- Designed and configured a Docker-based multi-service environment comprising Django, Node.js, WordPress, and MySQL, improving environment consistency and reducing local setup time by 40%.
- Replaced manual deployments with GitHub Actions CI/CD pipelines that run automated tests and deploy releases, cutting deployment time by 50% and enabling zero-downtime releases.
- Designed a RAG-style AI customization pipeline that retrieves relevant site content and gives it to the LLM as context, so responses are accurate and specific to each website.

Python Developer | Inmakes Infotech Pvt. Ltd. April 2023 – Jun 2024

- Built the Inventory & Order Management portal end to end with Python and Django, covering database design, business logic and a responsive frontend, for 200+ end users.
- Modeled 10+ database entities (products, stock, orders, customers, suppliers, users) and implemented CRUD operations and business rules for stock updates, order status flow and input validation.
- Developed 15+ REST API endpoints secured with JWT authentication, and enforced role-based access control (RBAC) so admins, managers and staff can access only the data and actions their role permits.
- Created responsive interfaces with Django templates, HTML5, CSS3 and Vanilla JavaScript; delivered 2+ production-ready web applications during the role.
- Collaborated with the team on requirements, bug fixing and deployments, using Git for version control.

IT Support | Ayisha Luqman & Co LLP May 2020 – Mar 2023

- Provided Level 1 and Level 2 technical support (hardware, software and network) for a 10-person accounting team, resolving 100% of requests within 24 hours.
- Managed user accounts, access permissions and software installations, including accounting and tax software, while following data confidentiality policies.
- Kept systems running with near-zero downtime during busy audit and tax filing periods.

PROJECTS

ATB Accessibility Toolbar | Yatnam Technologies accessibilitytoolbar.com

Django, Node.js, WordPress, Vanilla JavaScript, PostgreSQL, MySQL, AI Integration, AWS, Docker, CI/CD

- Built a full-stack accessibility product (live at accessibilitytoolbar.com) that lets any website add accessibility tools for users with physical, visual and cognitive disabilities.
- Implemented voice and speech-based navigation so users can control websites with spoken commands, and integrated AI features for intelligent navigation.
- Combined Django, Node.js, WordPress and databases into one Docker-based setup, deployed on AWS with automated CI/CD workflows.

Production & Manufacturing Tracking Platform *Yatnam Technologies (Confidential)*

FastAPI, React, CI/CD, GitHub, Agentic AI Development

- Built a FastAPI and React platform to replace spreadsheet- and email-based tracking of inventory and international container shipments.
- Developed FastAPI REST APIs and connected them to the React frontend.
- Set up GitHub workflows and CI/CD automation for automated delivery.
- Used agentic AI development tools to speed up code generation, feature work, and debugging.

EDUCATION

M.Sc. Data Science — Kalasalingam University 2025 – Present

B.Sc. Physics — University of Calicut 2016 – 2019

CERTIFICATIONS

- Software Engineering Specialization — The Hong Kong University of Science and Technology
- Generative AI for Software Developers — DeepLearning.AI, Coursera
- Python Master — Inmakes LearningHub
- JavaScript Algorithms and Data Structures — freeCodeCamp
- Front End Development Libraries — freeCodeCamp
- Databases for Developers: Foundations — Oracle Dev Gym

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL, Bash/Shell Scripting

Backend: Django, FastAPI, Node.js, REST APIs, Microservices, CRUD, Authentication

System Design & Architecture: System Design, Software Architecture, Scalable System Design, Microservices Architecture, API Design, Database Design, Distributed Systems, Caching, Load Balancing, Message Queues

Frontend: React, Vanilla JavaScript, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: PostgreSQL, MySQL, SQLite, Oracle SQL

DevOps & Cloud: Docker, Git, GitHub Actions, CI/CD, AWS, Linux/Unix

AI & Generative AI: Generative AI, LLM Applications, Prompt Engineering, RAG, OpenAI API, AI Integration

Agentic AI & Frameworks: AI Agents, LangChain, LangGraph, Tool Calling, Agent Workflows

Tools: GitHub, Postman, API Testing, Automated Deployment
